WHITEBOARDS

VISIONCHART is delighted to announce some major enhancements to our magnetic whiteboard range.

We are now manufacturing the substrate of all our whiteboards with a new product called 'HardSoft'®.

This product is environmentally responsive.

It's manufactured from *plantation* poplar trees. During the process, the natural stems and branches of the poplar tree are ground, steamed, then pressed into fibres ... *without* any chemical or oil based additives used in the process.

So *no* pollutants are emitted in manufacturing. *No* chemicals or toxic gluing agents are used.

In fact the Californian Air Resources Board has given *approval* for 'HardSoft'.

For more information see : <http://www.arb.ca.gov/toxics/compwood/compwood.htm>

In comparison many 'other' whiteboards use a backing sheet manufactured with either a MDF or particleboard backing which use toxic formaldehyde.

Formaldehyde has no safe level of exposure.

At VISIONCHART ... we're very proud to offer our new range of environmentally responsible whiteboards to you.

It's our way of helping make the planet ... a little greener !

All our Corkboards and Combination boards are also manufactured in an environmentally protective process as well !
